Introduction 1
Basic methods of powder production 1

Section 1  Powder Characterization and Testing 5

Chapter 1  Powder characterization and testing 7
Sampling of powders 7
Weight of sample 9
Particle size distribution analysis 9
Sieve analysis 9
Sedimentation methods 10
Accumulation of the sediment 12
Micromerographs 13
Turbidimetry 13
Method of weight samples 14
Light scattering 14
Surface and bulk characterization of powders 15
Particle image analysis 15
Size measurements 16
Particle shape 16
Optical microscopy 17
Data presentation 17
Metallographic microscope 18
Techniques of chemical analysis for powders 18
Scanning electron microscopy (SEM) 19
Auger electron spectroscopy 20
Secondary ion mass spectrometry (SIMS) analysis 20
Bulk analysis 21
X-ray powder diffraction (XRPD) 21
Inert gas fusion 22
Inductively coupled plasma atomic emission spectroscopy (ICP-AES) 22
Atomic adsorption spectrometry (AAS) 22
Determination of oxygen content by reduction methods 24
Surface area and porosity of powders 24
Gas adsorption 24
Permeametry 26
Picnometry 28
Porosimetry 29
Surface tension of mercury 30
Restrictions and limitations 30
Surface area determination 30
Hysteresis and detained mercury 31
Standardization 31
Bubble test of pore size 31
Bulk properties of powders 31
Bulk flow parameters 32
Cohesive strength 32
Frictional properties 33
Bulk density 35
Section 2 Powder Production Methods 45

Chapter 2 Mechanical crushing and grinding 47
Principles of grinding 47
Grindability 51
Hardgrove grindability index (ASTM D409 Standard) 52
Bong's Work Index (JIS M4002 Standard) 52
Crushing and grinding equipment 52
Crushers 53
Grinding techniques 53
Ball-medium types 53
Tumbling ball mills 54
Cylindrical ball mills 55
Conical ball mills 55
Rod mills 56
Planetary mills 56
Vibratory ball mills 56
Vibrating grinders 57
Medium agitating mills 58
Jet mills 60
Other high-energy milling methods 61
References 62

Chapter 3 Mechanical alloying 63
Mechanical alloying process 63
Milling equipment 64
Planetary ball mills 65
Shaker mills 65
Attritors 66
Commercial tumbling ball mills 67
Safety engineering 67
Mechanical alloying fundamentals 67
Oxide dispersion strengthened (ODS) alloys 69
Contact displacement reactions 70
Soluble-gas-atomization process
Ultrasonic gas atomization
Hot gas atomization
Liquefied gas atomization
Centrifugal atomization
Models of centrifugal atomization
Centrifugal atomization methods
Spinning disc atomization
Rapid solidification rate (RSR) process
Melt spinning roller technique
Rotating electrode atomization
Other methods
Impact atomization
Vibrating electrode atomization
Melt drop orifice technique
Impulse atomization method
Melt drop vibrating orifice method
Pulsated orifice ejection method
Roller atomization
Plasma atomization process
Vacuum-dynamic atomization
Granulation
Spray granulation
Spray drying
Control of powder properties
Water granulation
Atomization techniques
Applications
References
Selected references

Chapter 6  **Gas-phase method of metal powder production**
143
The theoretical basis of the gas-phase method
143
Mechanisms of powder formation during vapor condensation
144
Peculiarities of the formation of alloy powders
148
Principles of the controlled condensation process and the technique of powder production
149
Properties of powders and areas of their usage
152
References
153

Chapter 7  **Carbonyl method of metal powder production**
154
Chemical precipitation
154
Preparation of metal carbonyls
154
Theoretical basis of the synthesis
154
Preparation of the starting materials for carbonyl production
157
Synthesis of carbonyls
157
Extraction, purification and separation of carbonyls
158
Manufacture of powders by thermal decomposition of metal carbonyls
158
Physico-chemical basis of the process
158
The technique of powder manufacture
159
Manufacture of composite powders
160
Section 3 Processing of Powders and Processing Equipment

Chapter 11 Processing of powders and processing equipment

Dehydration
Thickening in cyclones
Conical and cylindrical thickeners
Filtration
Centrifugation
Cartridge vacuum filter
Rotary disk filter
Filter press
Thermal drying
Introductory conceptions and objectives
Water content
Drying characteristic curve
Drying rate
Dryer selection and design
Pneumatic convective dryer
Spray drying
Conveclive dryer with fluidized bed
Shaker dryer
Shaker infrared dryer
Drum contact dryer
Vacuum dryers
Powder classification by size
Sieving methods
Sieving apparatus
Round vibrating sifters
Air-assisted sieving machine
Air separation
Hydraulic classification
Mixing
Powder mixers
Rotary vessel type
Stationary vessel type
Complex type and others
Mechanism of powder mixing
Convective mixing
Shear mixing
Diffusive mixing
Statistical analysis of the mixing
Passivating techniques 255
Passivation methods 257
Hydrophobization 258
Nitriding and oxide formation 258
Microencapsulation 259
Proportioning, packaging and inter-stage transport 260
Proportioning 260
Packaging 261
Inter-stage transport 262
References 263

Section 5 Production of Non-Ferrous Metal Powders 265

Chapter 12 Production of aluminum and aluminum alloy powders 267
Gas atomization 268
Production of granules 271
Production of flake, pigments and pastes 275
Mechanical milling of aluminum and its alloys 275
The main application fields for aluminum and aluminum alloy powders 279
Nickel-clad aluminum powders 281
Typical physical properties of nickel-clad aluminum powders 282
Processing of aluminum scrap into powder products 282
Production of powder products from waste aluminum foil 282
Processing of recycled aluminum to granules 282
References 283

Chapter 13 Advanced aluminum alloy powders 284
Mechanical alloying 284
Rapid solidification process 287
Centrifugal atomization 292
RSR process 292
Spinning cup water granulation process 293
Water atomization 296
Spray forming 304
Other technologies 309
References 310

Chapter 14 Production of titanium and titanium alloy powders 314
Chemical reduction 314
Sodium reduction method 314
Magnesium reduction Method 317
Calcium hydride reduction process 317
Plasma-rotating electrode process (PREP) 317
Gas atomization 318
Hydrogenation/dehydrogenation (HDH) process 318
Amalgam metallurgy technique 318
Electrolysis of titanium compounds 319
Electrolytic refining of titanium 319
Other methods 320
Method of disproportionation of lower titanium halogenides 320
Mechanical alloying 321
Applications 321
## Chapter 15  Production of magnesium and magnesium alloy powders

- Mechanical crushing
- Melt atomization
- Gas-phase method
- Production of magnesium granules

## Chapter 16  Production of copper and copper alloy powders

- Atomization
- Commercial processes
- Copper powders
- Copper alloy powders
- Brasses
- Bronzes
- Irregular Cu-Pb-Sn powders
- Nickel silvers
- Production of copper powder by solid phase reduction of copper oxide
- Oxidation of copper powder
- Reduction of copper oxide
- Production of copper and copper alloy powders by electrolysis
- Electrodeposition of copper powders
- Results of electrolyte composition
- Results of processing conditions
- Powder production
- Properties of electrolytic copper powders
- Applications
- Production of copper powder by hydrometallurgical processing
- Leaching
- Reduction processes
- Copper precipitation from sulfuric acid media
- Copper precipitation from ammonia media
- Copper precipitation from organic phase
- Anhydride process
- Cementation
- Electrowinning
- Oxide dispersion strengthened (ODS) copper powder production
- Manufacture
- Properties
- Applications
- Applications of copper and copper-base powders
- Workplace atmosphere safely

## Chapter 17  Production of nickel and nickel-alloy powders

- Carbonyl process of nickel powder production
- Nickel tefracarbonyl formation and decomposition
- Commercial technique
- Low pressure carbonyl technique
- Average pressure carbonyl technique

Production of powders of lead, tin, bismuth and their alloys  
Atomization  
Lead powder production
Section 5  Safety Engineering in the Production of Powders  549

Chapter 24  Safety engineering in the production of powders  551
Dangerous and harmful manufacturing factors  551
Dust gaseous and vapor emissions  551
Properties of powders  552
Adhesion  552
Hygroscopicity and wettability  553
Abrasiveness  553
Ambient noise and vibration  553
Heat radiation  553
Electrostatic electricity  553
Inflammability and explosivity of powders  554
Thermophysical properties  555
Workplace atmosphere limited powder threshold values  558
Techniques for the prevention of exposure to hazards  560
Common demands to production area, equipment and processes  560
For preventing exposure  561
For controlling exposure hazards  561
Explosion and fire safety  562
Quenching means  563
Isolation of powder-gas emissions  564
Ejection pressure pe  566
Overpressure in closed chambers  567
Pressure created by equipment moving parts  568
Heat pressure pt  569
Pressure pmt - mass transfer result  569
Capacity of local suctions  570
Aspiration in combustible powder conditions  570
Melt atomization units  571
Grinding units  572
Definition of the local exhaust capacity  572
Aspiration during particulate material reloading in closed gravity chutes  572
Example of the computation  580
Solution  580
Discharge of containers  581
Single rotary hammer mills  582
Determination of the basic calculated magnitudes  582
Water treatment  586
Mechanical treatment methods  586
Chemical treatment methods  586
Ion-exchange method  588
Sorption, evaporation and flotation methods  589
Sorption Method  589
Evaporation Method  590
Flotation Method  590
